

QEESE

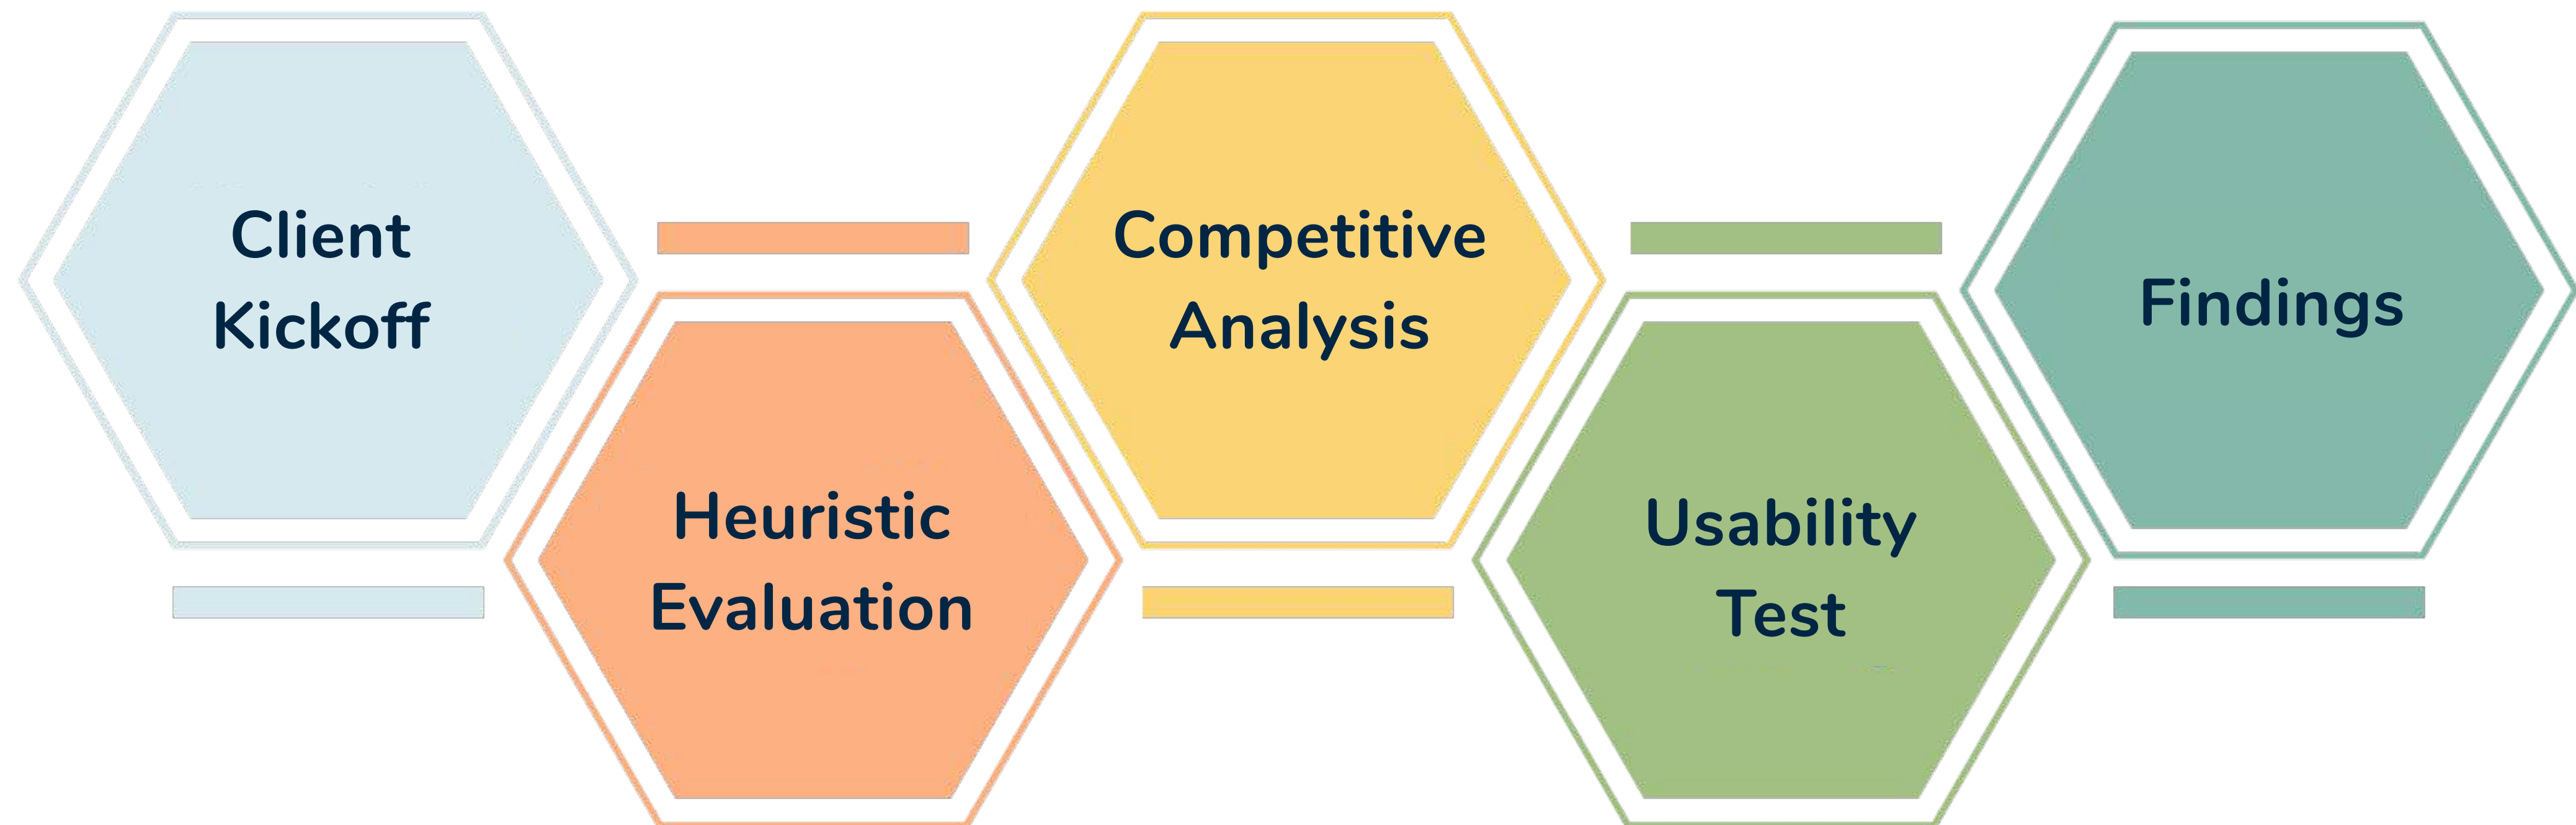

USABILITY REPORT

Darian Gleghorn
Martha Clark
Stephen Spencer
Ssu-Ting Wang
Yuqing Chen

Process

Client Kickoff

Goal

Ensure the QEESI is usable by the general population via these focus areas

Ensure online survey is
consistent, valid, and
usable

Easy for the general
population to interpret
the results

Compare the results
over time

Make QEESI easier to
share with doctor

Research Questions

Our approach

ENSURE CONSISTENCY, VALIDITY, AND USABILITY

What obstacles prevent users from completing the QEESI?

Is the current tool usable?

How easily do users understand the content of the QEESI?

Are there major “pain points” or confusion with wording?

EASY TO INTERPRET THE RESULTS

Does the display of the results make sense?

How easily and successfully do users score and interpret the QEESI?

COMPARE THE RESULTS OVER TIME

How easily do users compare the results over time?

MAKE QEESI EASY TO SHARE WITH DOCTOR

Is it easy to share the results of the QEESI?

Can results be shared by the method users expect?

Heuristic Evaluation

Method

A usability inspection method conducted by evaluators to identify problems in a user interface against a set of Heuristic Principles.

Nielsen's 10 Usability Heuristics

- Visibility of system status
- Match between system and real world
- User control and freedom
- Consistency and standards
- Help users recognize, diagnose, recover from errors
- Error prevention
- Recognition rather than recall
- Flexibility and efficiency of use
- Aesthetic and minimalist design
- Help and documentation

Ranking of Usability Issues

- 1 - Low
- 2 - Medium
- 3 - High
- 4 - Critical

3 Evaluators

- Individually evaluated based on heuristics
- Compared findings from individual evaluations
- Discussed and ranked issues found in evaluations

Key Takeaways

From Heuristic Evaluation

1. Wordy instruction & lack of visual hierachy
2. Easy to lose sight of scale while scrolling
3. Two different color lines in Symptom Star do not match users' expectations
4. Lack a salient way to remind users to save their results
5. Poor Error Reporting

QEESI©

Quick Environmental Exposure and Sensitivity Inventory V-1

The purpose of this questionnaire is to help identify health problems you may be having and to understand your responses to various exposures. Complete the survey, describing how you are now.

Prior to activating the "SUBMIT" button at the end of the survey Please consider saving your responses and/or making a printout of your responses using your browser options.

QEESI®

Scoring the QEESI©

The Quick Environmental Exposure and Sensitivity Inventory (QEESI©) was developed as a screening questionnaire for multiple chemical intolerances (MCI). The instrument has four scales: Symptom Severity, Chemical Intolerances, Other Intolerances, and Life Impact. Each scale contains 10 items, scored from 0 = "not a problem" to 10 = "severe or disabling problem." A 10-item Masking Index gauges ongoing exposures that may affect individuals' awareness of their intolerances as well as the intensity of their responses to environmental exposures.

Individuals whose symptoms began or intensified following a particular exposure event can fill out the QEESI© using two different ink colors, one showing how they were before the event, and the second how they have been since the event. The QEESI© displays a "Symptom Star" (Figure 1) which provides a graphical representation of patients' responses on the Symptom Severity Scale.

Figure 1. QEESI Symptom Star illustrating symptom severity in an individual before and after an exposure event (e.g., pesticide application, indoor air contaminants, chemical spill)

Key Takeaways

From Heuristic Evaluation

- 1. Wordy instruction & lack of visual hierachy
- 2. Easy to lose sight of scale while scrolling
- 3. Two different color lines in Symptom Star do not match users' expectations
- 4. Lack a salient way to remind users to save their results
- 5. Poor Error Reporting

Chemical Exposures

The following items ask about your responses to various odors or chemical exposures. Please indicate whether or not these odors or exposures would make you feel sick. For example, you get a headache, have difficulty thinking, feel weak, have trouble breathing, get an upset stomach, feel dizzy, or something like that. For any exposure that makes you feel sick, on a 0-10 scale rate the severity of your symptoms with that exposure. For exposures that do not bother you, answer "0." Do not leave any items blank.

For each item, click on one number only:
[0 = not at all a problem] [5 = moderate symptoms] [10 = disabling symptoms]

	0	1	2	3	4	5	6	7	8	9	10

Total Chemical Intolerance Score (0-100):

Name any additional chemical exposures that make you feel ill and score them from 0 to 10:

Key Takeaways From Heuristic Evaluation

1. Wordy instruction & lack of visual hierarchy
2. Easy to lose sight of scale while scrolling
3. Two different color lines in Symptom Star do not match users' expectations
4. Lack a salient way to remind users to save their results
5. Poor Error Reporting

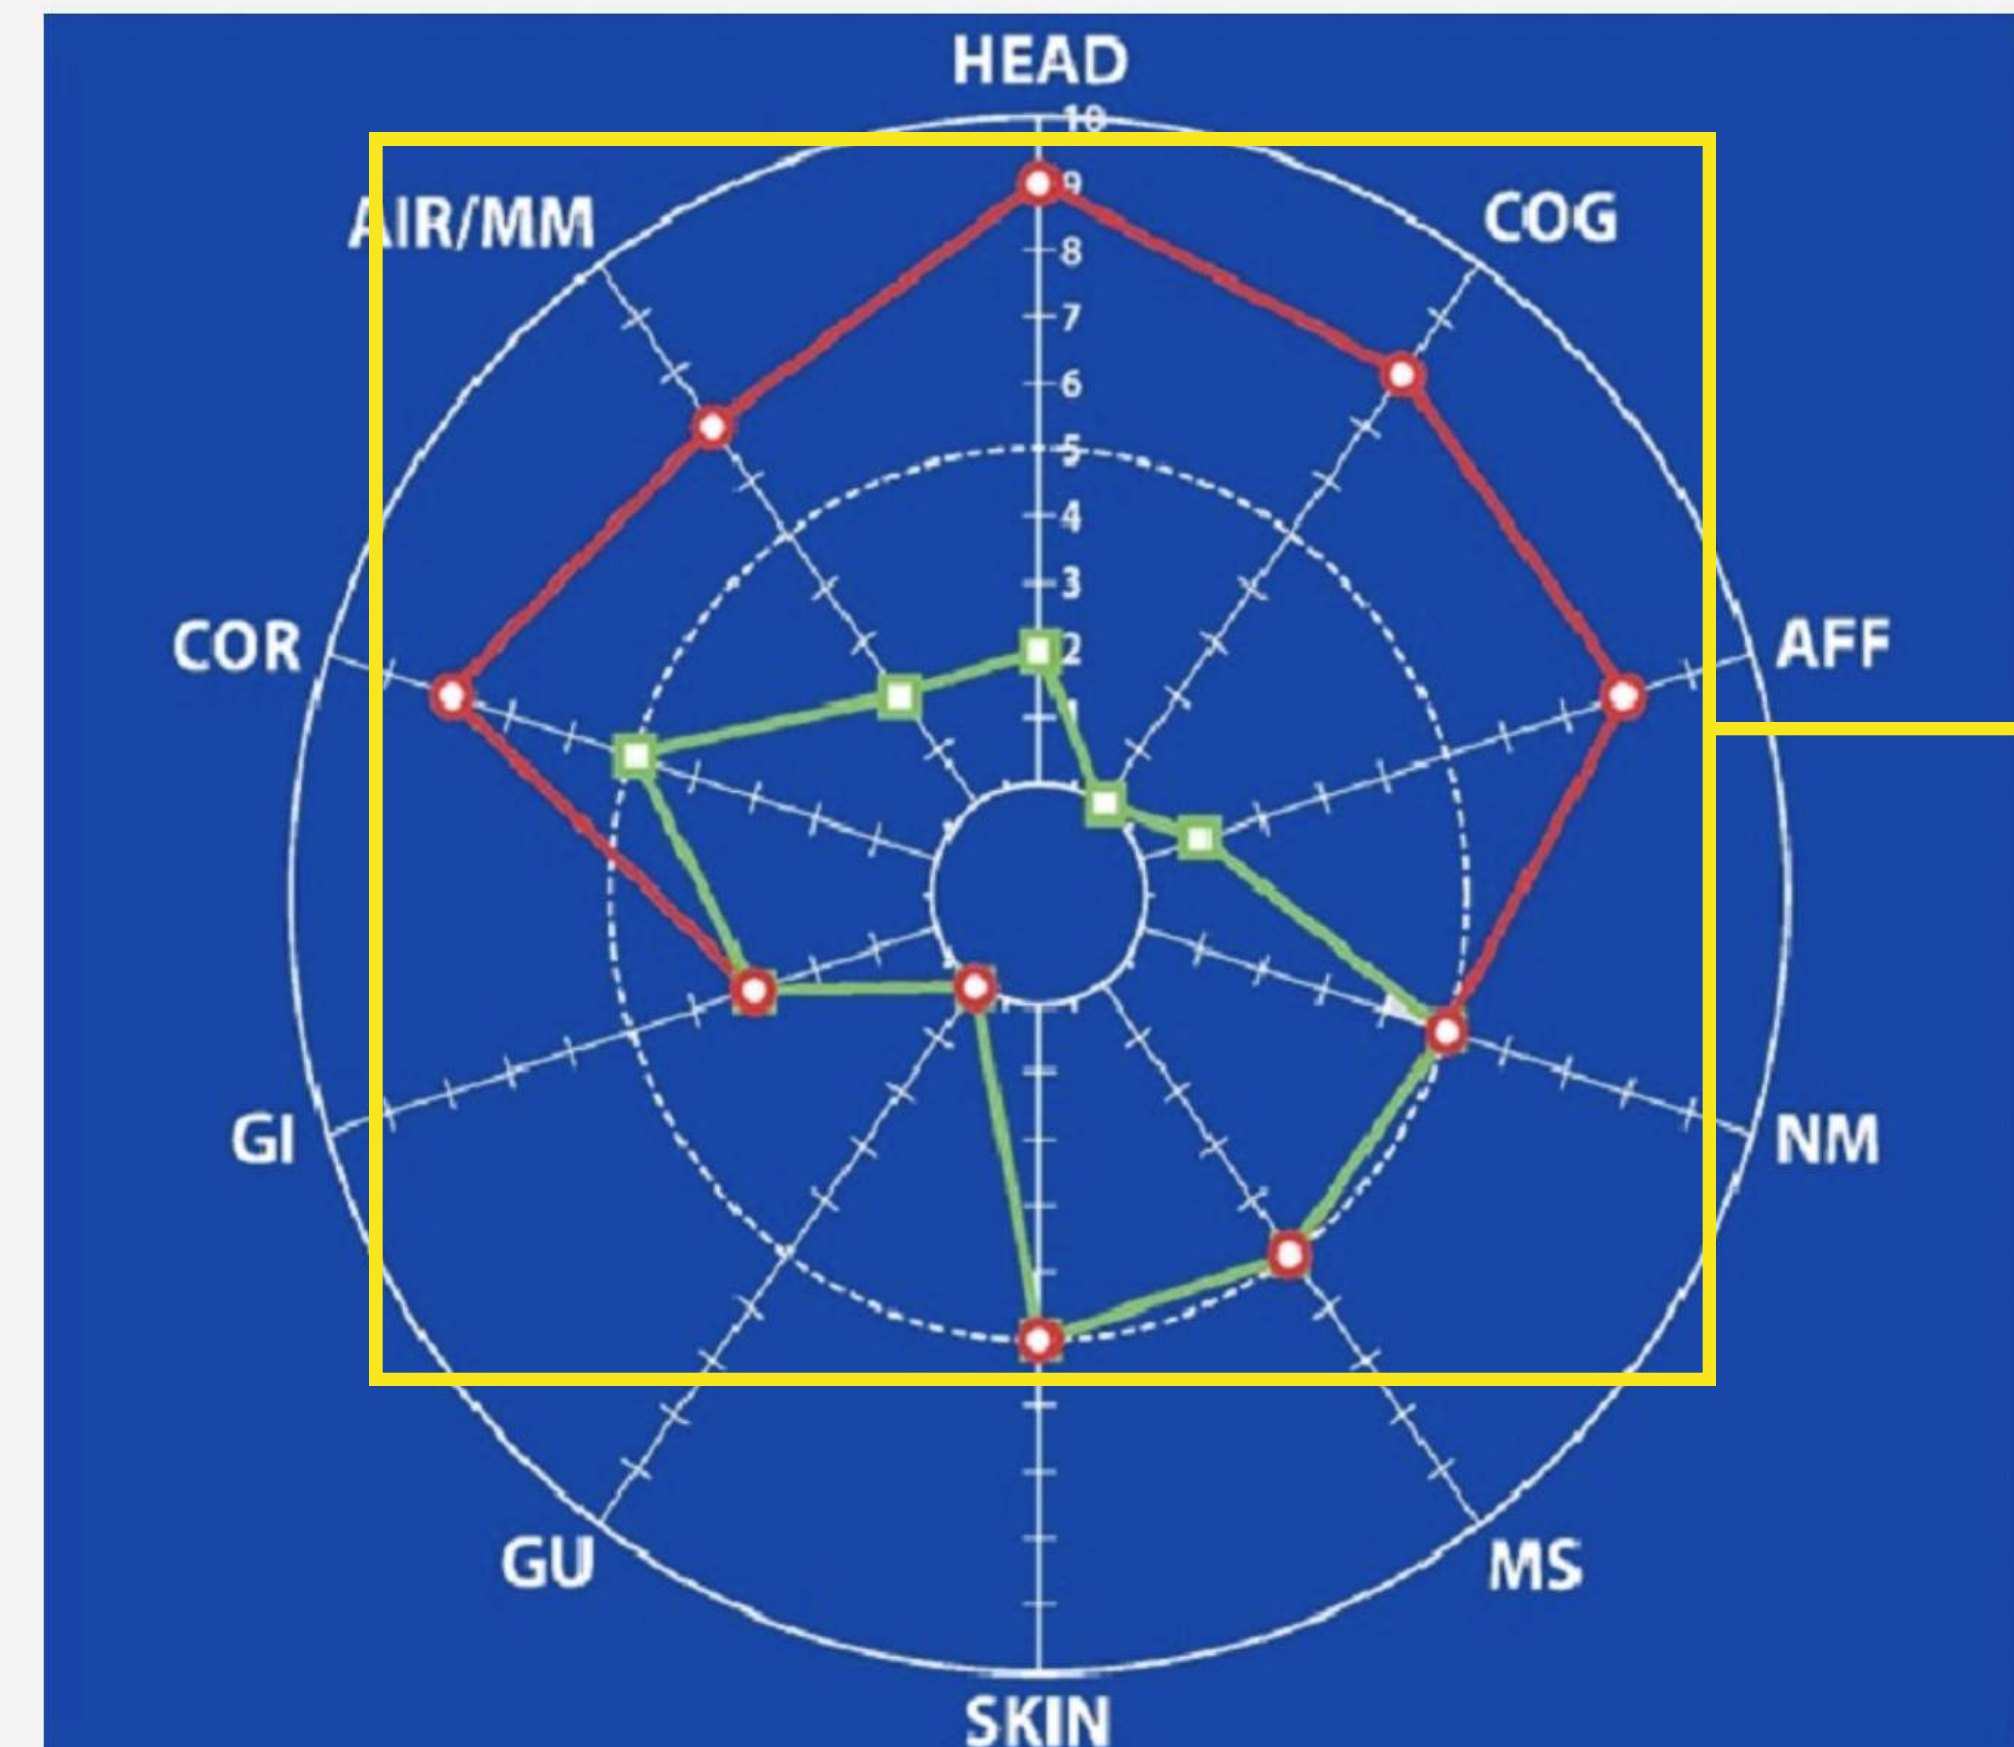

Scoring the QEESI©

The Quick Environmental Exposure and Sensitivity Inventory (QEESI©) was developed as a screening questionnaire for multiple chemical intolerances (MCI). The instrument has four scales: Symptom Severity, Chemical Intolerances, Other Intolerances, and Life Impact. Each scale contains 10 items, scored from 0 = "not a problem" to 10 = "severe or disabling problem." A 10-item Masking Index gauges ongoing exposures that may affect individuals' awareness of their intolerances as well as the intensity of their responses to environmental exposures.

Individuals whose symptoms began or intensified following a particular exposure event can fill out the QEESI© using two different ink colors, one showing how they were before the event, and the second how they have been since the event. The QEESI© displays a "Symptom Star" (Figure 1) which provides a graphical representation of patients' responses on the Symptom Severity Scale.

Figure 1. QEESI Symptom Star illustrating symptom severity in an individual before and after an exposure event (e.g., pesticide application, indoor air contaminants, chemical spill)

Symptom Star

Key Takeaways From Heuristic Evaluation

1. Wordy instruction & lack of visual hierarchy
2. Easy to lose sight of scale while scrolling
3. Two different color lines in Symptom Star do not match users' expectations
- 4. Lack a salient way to remind users to save their results**
5. Poor Error Reporting

Reminder in the introduction:

Please provide your ZIP or Postal code:

QEESI©
Quick Environmental Exposure and Sensitivity Inventory V-1
The purpose of this questionnaire is to help identify health problems you may be having and to understand your responses to various exposures. Complete the survey, describing how you are now.

Prior to activating the "SUBMIT" button at the end of the survey Please consider saving your responses and/or making a printout of your responses using your browser options.

QEESI

Reminder between symptom scores and their explanations:

COR = Heart/chest-related symptoms
AIR/MM = Airway or mucous membrane symptoms

Additional information on scoring and interpreting the QEESI© can be viewed at www.chemicalexposures.com

Prior to activating the "SUBMIT" button at the end of the survey Please consider saving your responses and/or making a printout of your responses using your browser options.

HEAD = Head-related symptoms

Reminder after submitting the result:

Thank you for taking the TILT screening survey. Please consider saving either a print or file copy of your responses for later reference.

Key Takeaways

From Heuristic Evaluation

- 1. Wordy instruction & lack of visual hierachy
- 2. Easy to lose sight of scale while scrolling
- 3. Two different color lines in Symptom Star do not match users' expectations
- 4. Lack a salient way to remind users to save their results

5. Poor Error Reporting

Do not provide immediate feedback allow users to quickly identify the errors:

7. Problems with balance or coordination, with numbness or tingling in your extremities, or with focusing your eyes? (NM)

8. Problems with your head, such as headaches or a feeling of pressure or fullness in your face or head? (HEAD)

9. Problems with your skin, such as a rash, hives or dry skin? (SKIN)

10. Problems with your urinary tract or genitals, such as pelvic pain or frequent or urgent urination? (For women: or discomfort or other problems with your menstrual period?) (GU)

Total Symptom Score (0-100):

Failed to precisely indicate where the problem was:

responses to various exposures. Complete the survey, describing how you are now.

Prior to activating the "SUBMIT" button at the end of the survey Please consider saving your responses and/or making a printout of your responses using your browser options.

NOTE: Some fields are required!

Your data was successfully saved, but you did not provide a value for some fields that require a value. Please enter a value for the fields on this page that are listed below.

Tentative Diagnoses

This section shows likely diagnoses and/or sub-clinical disorders. These are tentative diagnoses and need to be verified by a mental health professional. Symptoms that are problematic will be depicted in different colors, depending on their severity. Please refer to the legend provided for more information.

Legend

 Severe symptom

 Moderate symptom

 Mild symptom

Likely Diagnoses

You had symptoms in several categories of disorders covered in this test. This suggests that you should probably consult with a mental health professional for further testing or treatment, especially if you are distressed about the symptoms you are experiencing. There is most certainly a treatment out there that will help improve the symptoms you are experiencing.

The following are the areas of concern detected by the screening:

Heart Disease Risk Calculator

Since you have a history of cardiovascular disease, [work with your doctor to determine your risk.](#)

Take action

Before increasing your physical activity level, check with your doctor to make sure it's safe for you to proceed.

You have a personal history of heart disease. To help keep your heart as healthy as possible:

- Gradually increase your physical activity toward a goal of at least 150 minutes a week of moderate aerobic activity, 75 minutes a week of vigorous aerobic activity, or an equal combination of moderate and vigorous activity a week. Perform at least 10 minutes of aerobic exercise at one time, and spread aerobic exercise throughout your week. Include

Usability Test

5 In-person

1 Note-taker

4 Remote

45-60 minutes

Task

Your doctor has recommended that you take the QEESI before your appointment and wants to talk through your results during the appointment.

Ask questions about

- Experience with QEESI
- Experience sharing results with doctors

Findings & Recommendations

Display of Instructions

5/9 participants had trouble with the instructions, which were too wordy and long that they tended to ignore them.

“

Would be better if they were broken up and not doctor, patient, researcher all together.

“

Lots of text at the begining, would skip it, mentioning the doctor doesn't seem relevant.

“

I wouldn't read all the stuff before the chart.

Recommendations - Display of Instructions

**Simplify wording of the directions and make them hierarchical.
Only present relevant information to users.**

Depression test

Feeling sad or miserable most of the time?

When you're going through a tough time it's normal to feel down for a while, emotions like sadness and grief help make us human. But if you're feeling sad or miserable most of the time over a long period of time, you might have depression.

Take this self-test to help figure out whether you're showing any of the warning signs of depression. This won't give you a diagnosis but it will help you decide the next step.

TAKE THE TEST

<https://depression.org.nz/>

**“It's so incredible to
finally be understood.”**

Take our Personality Test and get a “freakishly accurate”
description of who you are and why you do things the way
you do.

Take the Test →

<https://www.16personalities.com/>

Ten-Point Scale

6/9 participants thought the 10 point scale was too much.

4/9 needed to scroll back up to see the labels.

“

The choices are so subjective; what's an 8 compared to a 6?

“

There are too many choices. Five would be better.

“

The numbers don't follow you, so I don't know which bubble is which, I would end up guessing rather than scrolling back to check.

Recommendations - Ten-Point Scale

Lower the number of options; freeze scale label while scrolling

Strongly agree	Somewhat agree	Neither agree nor disagree	Somewhat disagree	Strongly disagree
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Split Survey Into Pages

5/9 participants commented that the assessment was very long, and they had to keep scrolling on the survey.

“

It's quite long. I wish they had explained how long it would take at the beginning.

“

Oh, Lord. This is so long.

“

This page is so long, my hands got tired.

Recommendations - Split Survey Into Pages

Split assessment into several parts and add progress bar

I like to be needed by other people

Other

0%100%

<https://www.qualtrics.com/>

Symptom Star

Participants struggled to interpret the symptom star and **4/9** of them thought that the example of the symptom star was their own results.

“

I'm not really sure
how to read this

“

Does that mean
high tolerance or
is it bad for me? Is
it good or bad to
have high score?

“

“Oh! I thought this
is my result,” said
after the test.

Recommendations - Symptom Star

Provide results automatically and possibly change symptom star to other visual graph

Results Sharing

5/9 participants expected to be able to share results electronically with the doctor (e.g., submitting it automatically, and email).

“

I would expect to be emailed a copy, but they didn't ask for my email address.

“

I think that when I click “submit,” it is automatically sent to the doctor. I would be annoyed if I had to print it out and share results that way.

“

I hope it has summary page and I'll print it from there after I click submit.

Recommendations - Results Sharing

Provide easier ways to share and save
(email results, profiles, easy print)

If you were to control your risk factors
for cardiovascular disease to acceptable
levels, then your 30 year risk would be:

9%*

Before increasing your physical activity level, check with your doctor to make
sure it's safe for you to proceed.

- Eat a healthy diet that emphasizes:
 - Fruits, vegetables and whole grains
 - Low-fat dairy products and low-fat proteins, such as poultry, fish
and legumes

[About this tool](#)  [Print Results](#)

Start Over

The results from this assessment are estimates and should be interpreted as one
factor in determining your risk of heart disease. These results may occasionally be inaccurate and may
overestimate risk in some populations.

Visual Appeal

6/9 participants felt that the QEESI was outdated and not aesthetically appealing.

“

I'm not sure why it has to look so boring. It looks like a very serious paper.

“

On a scale from 1 to 5, it's a 3. It's functional, but it is not particularly creative or attractive.

“

There is no visual appeal to QEESI, the font was kind of small, a large font would would have been great.

Recommendations - Visual Appeal

Provide consistent and aesthetically appealing visuals

5% 

You enjoy vibrant social events with lots of people.

Agree ☐ ☒ ☐ ☐ ☐ ☐ ☐ Disagree

You often spend time exploring unrealistic yet intriguing ideas.
